

## **HOW SCIENCE CAN BE FUN**

*“Science is a combination of theory and experiment and the two together are how you make progress”*

*- Lisa Randall*

Science is a subject that, when taught properly, can be very enjoyable. A student cannot learn science from any teacher. Science has always been my favorite subject since I was a child. Many teachers have taught me this subject, but none have been as effective as Mrs. Vandana Ange ma'am! She has the most effective teaching method. The entire school adores her! She demonstrated each chapter with an experiment. She has made eighth grade a memorable year.

Our course began with a chapter on agriculture. I normally find agriculture boring, but the way Vandana ma'am began teaching us made it very interesting! Vandana ma'am's teaching style was popular with the entire class. She took us to the lab and demonstrated an experiment on soil erosion caused by water.

Then we started a lesson on sound. We conducted numerous experiments. My favorite was how we could see sound with a laser! Finally, we began 'Friction,' my favorite lesson. Vandana ma'am began the lesson with a demonstration. It was a massive one. For this experiment, we gathered more than 20 materials.

The goal of this experiment was to learn about the effects of friction on various materials. The experiment was enjoyed by the entire class. We came up with a page full of observations.

In an experiment to better comprehend pressure, we utilised a soap bar and hammered nails into it. To determine the weights of particular items, we employed a spring scale. Using microscopes, we observed microorganisms. Numerous things were done. In addition to teaching science, Vandana Maam also serves as a class teacher, mentor, and motivator. She is the best teacher in the world!
